ZYLON® PBO

Key Features
- Excellent strength & modulus properties
- Good flame resistance
- Excellent thermal stability
- Excellent resistance to creep
- Good chemical resistance

Disadvantages
- Very poor UV resistance
- Poor compressive strength
- Strength loss in exposure to strong acids

FIBER-LINE® PROCESS FOR ZYLON® PBO
- Coating
- Twisting
- Extrusion
- Pultrusion
- Precision Winding

FIBER-LINE® ZYLON® PRODUCTS
- Strength Members

Molecular Structure

Chemical Name
P-phenylene-2,6-benzobisoxazole (PBO).

Manufacturer
Toyobo™.

History
PBO was first developed in the 1980’s and is the world’s strongest man-made fiber. It is also the first organic fiber whose cross-sectional strength outperforms both steel and carbon fiber.

Composition
Zylon® PBO is a rigid-rod isotropic crystal polymer that is spun by a dry-jet wet spinning process.

Common Deniers
250, 500, 1000, 1500.

Types
AS- Standard.
HM- High Modulus.
POLYBENZYOATE (PBO) BARE FIBER PERFORMANCE

CHEMICAL COMPATIBILITY

Chemical Resistance to Acid: Strength loss in HCl, HNO3, H2SO4 & NaCl.
Chemical Resistance to Alkali: Strong alkalis will attack at high temperature or concentration.
Chemical Resistance to Organic Solvent: Strength loss in NaOCl.

ABOUT FIBER-LINE®

For over 25 years, FIBER-LINE® has provided science-driven expertise that improves the performance and the end-use processing of high performance fibers. Our products enable the search for new energy reserves and extend the life of fiber optic telecommunication cables. They also add important characteristics, such as SWELLCOAT® water-blocking, water repellence, adhesion, color, and wear and UV-resistance to these and many other applications. We believe that our ongoing commitment to protect the environment, to remain at the forefront of fiber and coating technology, and to ‘treat others as we want to be treated’ will continue to drive the success of our customers, shareholders, and employees.
